

How can the NAB regulate the services that I am paying for, not supported by advertisers??? I travel for a living and use XM radio all over the country for local traffic and weather information that could be potentially life-saving. Often in remote areas, you cannot even pick up a station to give vital information, but XM satellite is ALWAYS there! There have even been times when it has saved me hundreds of miles of travel out-of-the-way by alerting me that an interstate is closed due to a rock slide or a flood, etc.
